# Our Ecotrade Programme – the green economy

We fully realise that, by the very nature of some of our products, some can only be used for a short time, and sometimes just once. Our answer to this is to recycle as much as we possibly can and encourage our customers to do the same.

Customers can partner with AHN by incorporating sustainable laboratory practices through the ecotrade programme.

By partnering with a local distributor you can submit your old pipettes (of any brand, not just ours). Our distribution partner will then ship the old pipettes to our manufacturing facility where we will carefully disassemble each pipette into its individual component, following Green Dot guidelines.

## 03

### ENVIRONMENTALLY-FRIENDLY RECYCLING

As part of the Green Dot scheme (Der Grüne Punkt), AHN Biotechnologie GmbH will ensure the environmentally-friendly recycling of all components

## 01

### PIPETTE RETURN

Send your old pipettes, regardless of brand and condition, to your local distributor who will forward them to AHN Biotechnologie GmbH in Nordhausen, Germany

## 02

### DISASSEMBLY AND SORTING

Our dedicated team will disassemble all the components and sort them into plastic, rubber, metal, etc., in accordance with the German national recycling programme

MULTICHANNEL PIPETTES

## Easy and light tip mounting and ejection

Excessive use of the thumb is a major cause of repetitive strain injuries and user discomfort in multichannel pipetting.

The unique design of the **CAPP Aero 96 Multichannel Pipette** considerably reduces the thumb workload. Ejection is simply a matter of applying light pressure to the levered ejector arm.

Thanks to the double O-rings on the aluminium and metal nose cones, the **CAPP Aero 96 Multichannel Pipette** eliminates the need to 'hammer' your pipette into the tip rack to mount your tip correctly. You only need to apply a slight even pressure to perfectly secure the tips to the nose cones.

**CAPP Aero 96 Multichannel Pipettes** are one of the lightest pipettes on the market and produce a consistent and reliable liquid transfer result in one ergonomic solution.

## Single channel accuracy and precision in a multichannel package

The **CAPP Aero 96 Multichannel Pipette** achieves single channel accuracy and precision across all channels due to the special design and construction of the **CAPP** piston assembly.

The robust, fully autoclavable pipette body offers easy maintenance, while the unique **CAPP** design, with individually replaceable tip bases, reduces the cost of what were once inevitable repairs.

The **CAPP Aero 96 Multichannel Pipette's** use of anodised aluminium and metal nose cones instead of plastic ones substantially reduces breakage caused by accidental dropping or inaccurate tip mounting.

The majority of internal construction parts are made of lightweight metal components and, along with stainless steel pistons, ensure a highly reliable performance and stability over time in terms of accuracy and precision. This smart, highly ergonomic pipette is built to last.

## MECHANICAL PIPETTES

**CAPP** offers a comprehensive selection of practical accessories to complement its full line of mechanical pipettes. Uniquely drawn up and quality-made, they combine design, style and simplicity to deliver optimal storage and safety solutions for modern laboratories.

Pre-calibrated interchangeable, adjustable and fixed volume knobs set **CAPP** pipettes aside from any other liquid-handling pipette on the market by allowing users to use one pipette with many fixed volume knobs.

This substantially reduces the cost. For example, instead of four fixed volume pipettes, you can buy one **CAPP** pipette and four inexpensive knobs to achieve the same precise results.

# CAPP *Maestro*

ELECTRONIC PIPETTES

**CAPP *Maestro* Electronic Pipette** combines all the benefits that the modern researcher needs. The “*Favourites*” button is the first function that you will see on **CAPP *Maestro***’s OLED display. The fully-coloured OLED display gives better optical control while pipetting, as it has better contrast and a greater screen refresh rate compared to other LCD screens. Additionally, an OLED display consumes less power compared to other displays.

**CAPP *Maestro***’s lightweight construction and elegant ergonomic design with a wide hook allows you to cradle the pipette in the palm of your hand - no need to actually “grab it”.

**CAPP *Maestro* Electronic Pipette**’s tip ejector also works as a finger rest for your thumb. Simply rest your thumb on the tip ejector, and gently activate the pipetting button at the same time.

Optimise your serial work with advanced functions such as multi-dispensing, dilution and mixing, whilst easily navigating through the user-friendly graphic intuitive interface that is self-explanatory and easily operated!

For your routine lab work, **CAPP *Maestro* Electronic Pipette** allows you to easily store your favourite protocols and to switch from one to the other in a matter of 2 clicks.

If you are tired of changing the batteries so often, try **CAPP *Maestro*** which uses lithium batteries - ideal for long-lasting performance.

You can also use your **CAPP *Maestro* Electronic Pipette** while it is charging.

Calibration and password-setting functions are available on this pipette.

ELECTRONIC PIPETTES

The **CAPP *Tronic* Electronic Pipette** is certainly one of the easiest pipettes to set and use. Having only a one-sided programming manual, familiarising yourself with **CAPP *Tronic***'s functions takes just a matter of minutes.

In addition to standard pipetting, you can choose between the most widely used pipetting modes, including reverse pipetting, multi dispensing, mixing and sequential dispensing.

Up to nine individual protocols can be stored, thanks to the extensive memory capacity.

Supplied with one long-life and easily exchangeable lithium battery, the **CAPP *Tronic* Electronic Pipette** allows uninterrupted pipetting without any need to stop working in order to recharge.

The O-rings on the tip base provide an excellent fit, with a great variety of universal fitting tips.

# CAPP Forte

## BOTTLE-TOP DISPENSER

Made of highly chemical-resistant materials, such as PTFE, PFA, borosilicate and platinum, **CAPP Forte Bottle-Top Dispenser** is the ideal choice for dispensing bases, acids and solvents. Using the positive displacement principle, where a tightly fitting piston wipes the walls of the glass-cylinder, removing the liquid completely, **CAPP Forte** can be used for dispensing media that are difficult to handle, such as crystallizing, viscous, foaming or vaporizing liquids. Autoclavable at 121°C / 250°F, **CAPP Forte** can also be used for sterile applications.

For use with hydrogen fluoride/ hydrofluoric acid, **CAPP Forte Bottle-Top Dispenser** offers a specially adjusted model, called CF10-1-HF (1-10mL), where the dispensed liquid only comes into contact with the materials of PFA, Al<sub>2</sub>O<sub>3</sub>, FEP, ETFE, PTFE, platinum-iridium and PVDF.

**CAPP Forte Bottle-Top Dispenser** offers a range of features which increase user-safety and comfort. Locking the 3-way valve disables the dispensing function, preventing unintentional reagent flow. Additionally, the system can be evacuated without removing the unit from the bottle, and the transparent plastic sleeve protects the user from cuts and splashes in the event of the accidental breaking of glass.

Both right and left-handed users can quickly and accurately set up the desired volume using the slide-and-lock volume setting button. The discharge tube can be rotated, making the bottle label visible at any time. The telescope intake tube is easily adjustable, fitting reagent bottles without cutting. Three PP-adapters for the most common bottle sizes are supplied with the instrument.
